

A Level Product Design: Transition Activity 2016

To be successful within A level Product Design, you need to be prepared to experiment and try a variety of skills to complete tasks. You will be encouraged to develop your independence, problem solving and initiative to complete tasks.

The task we are setting you over the summer, we want to see how you tackle model making and see your thought process for your choices without any guidance from teachers.

Task: to create a replica model of a confectionery box.

You can choose any box you wish to make. There is no restriction on materials or processes you have used to create the replica.

On your first lesson back in September, you will need to present your replica and explain the process you took.

Assessment Criteria:

- Photo diary of your making process with justification for manufacturing and material choices
- Develop a range of tests to see if your product was successful.
- Present your findings back to the group

You will be assessed on your presentation.

Good luck ☺
